

Leadership and Culture Site Safety Supervisor Training

This site safety supervisor course, delivered in partnership with Programmed (RTO No. 110043), is for anyone who performs the duties of a mine supervisor. It's designed for people employed in the mining, construction, and civil industries.

Participants will learn knowledge and skills to enable them to:

- Communicate effectively (oral and written)
- Conduct health and safety investigations
- Identify risks in the workplace and conduct risk management

Upon successful completion of the program, participants will receive a statement of attainment for four units of competency from the RII30120 Cert III in Surface Extraction Operations.

Practical scenarios relevant to your organisation are used so that the participants can extract full value by experiencing how their skills can be implemented.

Participants are supported by experienced facilitators who have had many years of hands on experience.

We use straightforward safety culture and performance frameworks that work on an individual, team, and organisational level.
